National Economy

FOMC Statement March 16, 2010

Economic activity has continued to strengthen...the labor market is stabilizing.

Household spending is expanding at a moderate rate...constrained by high unemployment, modest income growth, lower housing wealth, tight credit.

Business spending on equipment and software has risen significantly.

Bank lending continues to contract... financial markets supportive.

Inflation ... subdued for some time.

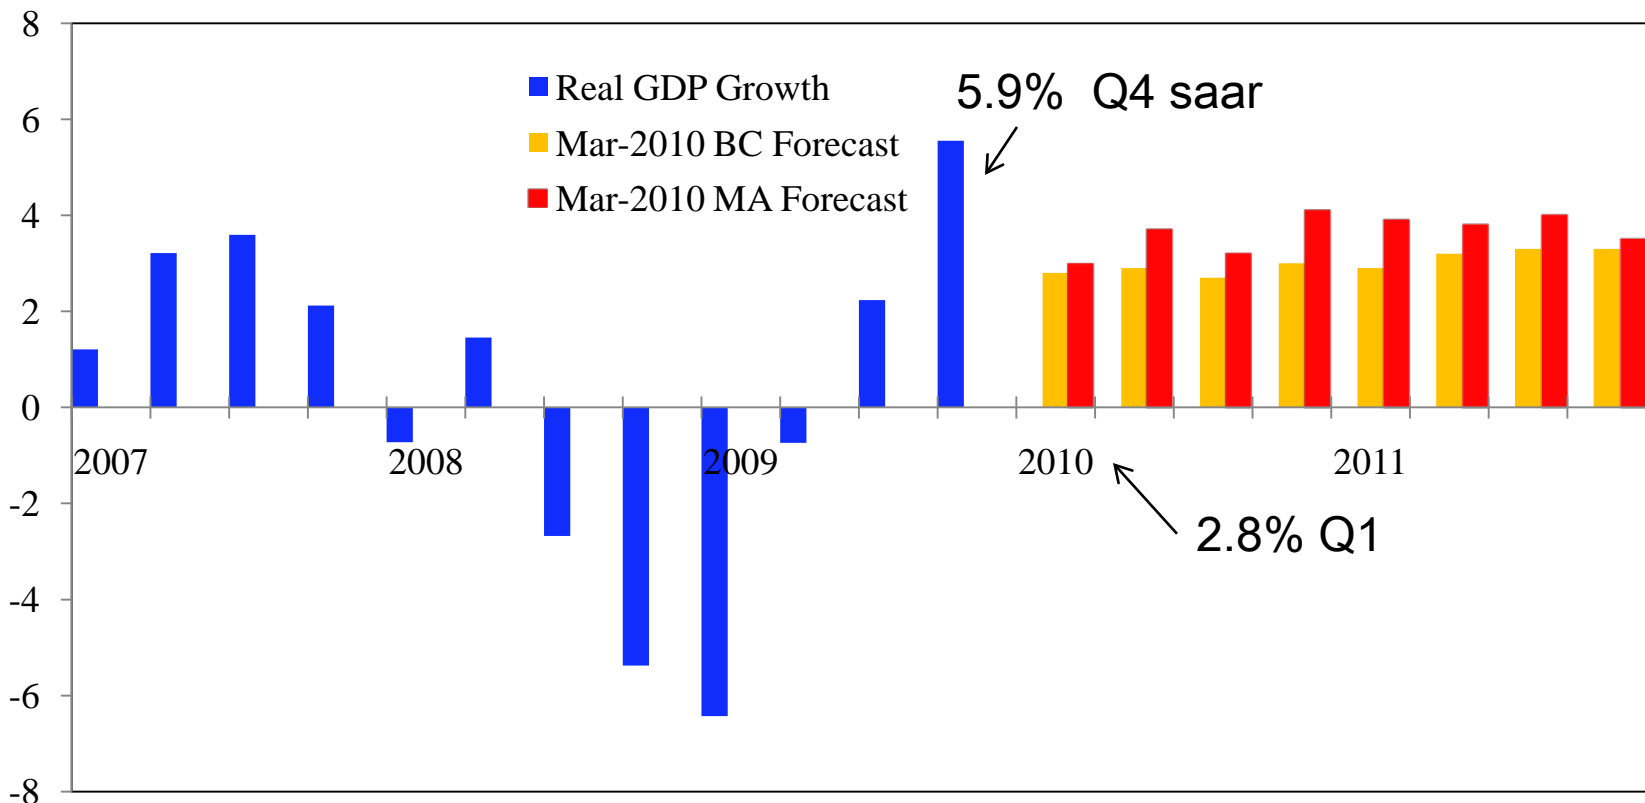

→ Investment in nonresidential structures is declining.

→ Housing starts flat...at a depressed level.

Recent Review Articles - March/April 2010

["Lessons Learned? Comparing the Federal Reserve's Responses to the Crises of 1929-1933 and 2007-2009"](#)

by [David C. Wheelock](#)
The financial crisis of 2007-09 is widely viewed as the worst financial disruption since the Great Depression of 1929-33. However, the accompanying economic recession was mild compared with the Great Depression, though severe by postwar standards.

["Institutions and Government Growth: A Comparison of the 1890s and the 1930s"](#)

by [Thomas A. Garrett](#), [Andrew F. Kozak](#), and [Russell M. Rhine](#)
Statistics on the size and growth of the U.S. federal government, in addition to public statements by President Franklin Roosevelt, seem to indicate that the Great Depression was the primary event that caused the dramatic growth in government spending and intervention in the private sector that continues to the present day.
